

Class Test # 1

Duration: 25 mins, Total Marks: 20

Question 1 (Theoretical – 10 Marks)

Explain the trade-off between Cost, Speed, and Reliability in Operations Management.

1. Define each element
2. Explain why improving one may affect the others
3. Provide an example from either software, IT services, or hardware industry

Question 2 (Scenario-Based – 10 Marks)

A service-based IT company in Bangladesh signs multiple international contracts at the same time. However, engineers are overbooked, deadlines are missed and clients complain about slow response.

Using operations management concepts:

1. Identify which core fundamentals are being mismanaged.
2. Explain the role of capacity management in this situation.
3. Suggest two operational improvements.

Class Test # 1

Duration: 25 mins, Total Marks: 20

Question 1 (Theoretical – 10 Marks)

Differentiate between Operations Management and Project Management.

1. Define both concepts
2. Explain at least three key differences
3. Discuss how projects and operations intersect during the product lifecycle

Question 2 (Scenario-Based – 10 Marks)

A service-based IT company in Bangladesh signs multiple international contracts at the same time. However, engineers are overbooked, deadlines are missed and clients complain about slow response.

Using operations management concepts:

1. Identify which core fundamentals are being mismanaged.
2. Explain the role of capacity management in this situation.
