

Demo Mid Question IMG 401

Total Marks: 20

Time: 1 Hour

1. List the key difference between operations and project management [3]
2. A cloud-based startup deployed a new data analytics service. The system architecture and workflow were well designed, and initial testing showed good performance. However, after launch, users experienced frequent slowdowns and service interruptions. An internal review revealed that the company had limited servers, insufficient trained engineers for monitoring, improper scheduling and a very tight operational budget. Management had intentionally minimized these allocations to cut costs. Identify the core element of operations that was primarily not met in this scenario and explain how poor handling of this element led to the system issues. [3]
3. A manufacturing company planned to increase its production by 20% within six months. The manager set targets and deadlines, but failed to properly assign tasks, did not clearly define reporting relationships, and rarely monitored employee performance. As a result, production delays increased and the target was not achieved. Discuss which management functions were not effectively performed in this scenario and explain how their poor execution affected organizational performance. [4]
4. Explain the autocratic leadership by discussing its key advantages and disadvantages. [5]
5. Two team members are in conflict over how to complete a project. Their manager brings both of them together, encourages open discussion, and helps them find a solution that satisfies both parties without compromising the project goals. Analyze how this conflict resolution approach affects team performance and relationships. [5]
